

***Citrus Industry Magazine – UF/IFAS SWFREC Citrus Mechanical Harvesting Program “What’s Shakin” column***

**October 2014**

Nelson Harvesters P/L, located in Australia, has developed an over the row machine that is adaptable for use in processed olives or oranges. With a few modifications you can switch from harvesting olives to oranges as there is very little difference between the machine needs. In his latest video on YouTube, Andrew Nelson narrates the video while the machine is shown working in a commercial olive orchard in Jerilderie, New South Wales, Australia. He claims his machine can remove 95% of the fruit.
