March 2007

IFAS Citrus Mechanical Harvesting Field Day, Immokalee

Mark your calendar for April 18, 2007 to attend the next IFAS Citrus Mechanical Harvesting Field Day. It will be held in Immokalee at the University of Florida’s Southwest Florida Research and Education Center. You will hear the latest on research being done on citrus mechanical harvesters, including abscission and tree health. And, you will have a chance to visit a “concept grove” planted with high headed trees at the Southwest REC. We are planning a trip to a commercial grove to observe the trunk and canopy shaker systems. Lunch will be provided. Please go to <http://citrusMH.ifas.ufl.edu> for program and registration information.
