

What's Shakin

The Citrus MH website is continually changing. Please check out the new publications and videos we have added. There were over 30 new publications added covering abscission, economics, machine enhancements and tree health. Many of these are published in 2007. There will be others added as they are made available.

Also, there are new videos available on the current machines. If you have never seen the machines working, take the time to go and watch the videos showing the machines working in a grove. Along with the video clips there is a narrative description of how the machine works and the results you might expect.

For further information please visit our website: <http://citrusMH.ifas.ufl.edu>.
